## Prakata

SNI ISO 18082:2014, dengan judul *Peralatan anestesi dan pernapasan - Dimensi konektor non interchangeable screw-threaded (NIST) tekanan rendah untuk gas medis*, merupakan hasil adopsi identik dari standar ISO 18082:2014 dan Amandemen 1:2017 *Anaesthetic and respiratory equipment — Dimensions of noninterchangeable screw threaded (NIST) low pressure connectors for medical gases*, dengan metode adopsi terjemahan dua bahasa dan ditetapkan oleh BSN Tahun 2024.

Standar ini menggantikan SNI ISO 18082:2014, *Peralatan anestesi dan pernapasan - Dimensi non interchangeable screw-threaded (NIST) konektor tekanan rendah untuk gas medis*, yang disusun dengan metode adopsi *republication-reprint* dan ditetapkan oleh BSN Tahun 2020.

Standar ini disusun oleh Komite Teknis 11-03 Alat Kesehatan Elektromedik dengan Badan Standardisasi Nasional (BSN) sebagai sekretariat Komite Teknis. Standar ini telah dibahas dalam rapat teknis, dan terakhir disepakati dalam rapat konsensus di Jakarta pada tanggal 23 April 2024 yang dihadiri oleh para pemangku kepentingan (*stakeholder*) terkait, yaitu perwakilan dari produsen, konsumen, pakar dan pemerintah, serta perwakilan dari lembaga penguji, asosiasi, perguruan tinggi, pakar serta instansi terkait.

Apabila di kemudian hari pengguna menemukan kesulitan dalam penggunaan standar ini, maka dianjurkan untuk merujuk pada standar aslinya yaitu ISO 18082:2014 dan Amandemen 1:2017 dan/atau dokumen terkait lain yang menyertainya.

Perlu diperhatikan bahwa kemungkinan beberapa unsur dari Standar ini dapat berupa hak kekayaan intelektual (HAKI). Namun selama proses perumusan SNI, Badan Standardisasi Nasional telah memperhatikan penyelesaian terhadap kemungkinan adanya HAKI terkait substansi SNI. Apabila setelah penetapan SNI masih terdapat permasalahan terkait HAKI, Badan Standardisasi Nasional tidak bertanggung jawab mengenai bukti, validitas, dan ruang lingkup dari HAKI tersebut.

## Pendahuluan

Standar Internasional ini telah disiapkan sebagai tanggapan terhadap perlunya metode yang aman untuk menghubungkan peralatan medis yang dimaksudkan untuk memberikan gas medis ke pasien atau alat kesehatan listrik. Gas medis disimpan dalam silinder atau saluran kriogenik, atau dapat diproduksi di lokasi; beberapa alat kesehatan (misalnya regulator tekanan, rakitan selang, alat pengukuran aliran, ventilator paru-paru, *workstation anestesi*) dapat dipasang di antara sumber pasokan dan alat medis. Pada setiap antarmuka konektor khusus gas diperlukan untuk memastikan bahwa gas medis yang dimaksud, diberikan kepada pasien.

Meskipun keinginan untuk mencapai kesepakatan pada satu Standar ini untuk konektor *screw-threaded* tidak pernah diragukan, tapi pola penggunaan saat ini telah membuat perjanjian seperti itu mustahil.

Namun demikian, kekhawatiran bahwa proliferasi standar atau praktik nasional individu pada akhirnya akan mengakibatkan hubungan silang yang berpotensi berbahaya antara komponen untuk gas yang berbeda telah menyebabkan pilihan beberapa sistem konektor yang berbeda, yang semuanya dimaksudkan untuk tidak kompatibel satu sama lain.

Standar ini menentukan dimensi dan alokasi *non interchangeable screw-threaded* (NIST) untuk digunakan dengan gas medis.

Standar ini tidak menentukan dimensi dan alokasi

- spesifikasi konektor *diameter index safety system* (DISS) yang terdapat di CGA V-5[9],
- konektor *sleeve indexed system* (SIS) yang terdapat di AS 2896[7], dan
- konektor cepat yang dirancang untuk unit terminal yang terdapat di ISO 9170-1

## **Peralatan anestesi dan pernapasan – Dimensi konektor *non interchangeable screw-threaded* (NIST) tekanan rendah untuk gas medis**

### **1 Ruang Lingkup**

**1.1** Standar ini menetapkan dimensi, alokasi dan penandaan konektor *non-interchangeable screw-threaded* (NIST) yang dimaksudkan untuk digunakan pada tekanan operasi hingga 1.400 kPa, dan untuk sistem vakum pada tekanan absolut tidak lebih besar dari 60 kPa.

**1.2** Standar ini menetapkan konektor NIST yang digunakan dengan gas medis berikut ini:

- oksigen;
- dinitrogen oksida;
- gas medik;
- helium;
- karbon dioksida;
- xenon;
- campuran tertentu gas yang tercantum di atas;
- oksigen 93;
- udara untuk menggerakkan alat bedah;
- nitrogen untuk menggerakkan alat bedah;
- dan untuk digunakan dengan tabung vakum.

**CATATAN** Rangkaian selang tekanan rendah untuk gas medis dan vakum yang ditentukan dalam ISO 5359 [3].

**1.3** Informasi yang akan diberikan oleh produsen dikecualikan dari lingkup standar ini karena informasi tentang penggunaan konektor NIST sudah disediakan oleh produsen pada setiap alat kesehatan yang dipasang secara permanen oleh konektor.

**CATATAN** Aspek lingkungan yang terdapat di setiap Standar Internasional mengenai alat kesehatan yang dilengkapi dengan konektor NIST.

### **2 Istilah dan definisi**

Untuk keperluan dokumen ini, istilah dan definisi berikut berlaku.

#### **2.1**

#### **gas-spesifik**

memiliki karakteristik yang mencegah koneksi antara sambungan/layanan gas yang berbeda

[SOURCE: ISO 7396-1:2007, 3.14]

#### **2.2**

#### **gas medis**

gas atau campuran gas apa pun yang ditujukan untuk pemberian kepada pasien untuk tujuan anestesi, terapeutik, diagnostik atau profilaksis, atau untuk aplikasi alat bedah

[SOURCE: ISO 4135:2001, 1.1.1]

## 2.3

### **konektor NIST (*non-interchangeable screw-threaded*)**

komponen dengan rentang *male* dan *female* yang dimaksudkan untuk menjaga spesifikasi gas dengan mengalokasikan satu set sekrup ulir kiri atau kanan dengan diameter yang berbeda terhadap komponen pasangannya untuk setiap gas tertentu

[SOURCE: ISO 9170-1:2008, 3.10]

## **3 Dimensi dan alokasi konektor NIST**

Dimensi *body*, *nipple* dan *nut* dari NIST harus memenuhi Gambar 1, 2, 3 dan 4 dan Tabel 2, 3 and 4.

Alokasi konektor NIST harus memenuhi Tabel 1.

Kesesuaian harus diverifikasi dengan pengukuran dan inspeksi visual.

**Tabel 1 — Penentuan konektor NIST — ulir putar kanan**

| <b>Referensi<br/>konektor</b>                    | <b>Gas</b>  |
|--|---|
| A1   | Campuran udara/oksigen medik  |
| A2   | Campuran oksigen/dinitrogen oksida [ $O_2 = 50\%$ (fraksi volume)]  |
| A3   | Udara medik   |
| A4   | Dinitrogen oksida   |
| A5   | Campuran oksigen/dinitrogen oksida [ $N_2O < 80\%$ (fraksi volume)] |
| A6   | Udara untuk menggerakkan alat bedah                                 |
| A7   | Tidak ditentukan  |
| A8   | Oksigen   |
| A9   | Tidak ditentukan  |
| A10  | Vakum   |
| B11  | Karbon dioksida   |
| B12  | Oksigen 93  |
| B13  | Campuran oksigen/karbon dioksida [ $CO_2 \leq 7\%$ (fraksi volume)] |
| B14  | Campuran helium/oksigen [ $He \leq 80\%$ (fraksi volume)]           |
| B15  | Campuran helium/oksigen [ $O_2 < 20\%$ (fraksi volume)]             |
| B16  | Xenon   |
| B17  | Campuran gas khusus   |
| B18  | Nitrogen untuk menggerakkan alat bedah                              |
| C19  | Campuran karbon dioksida/oksigen [ $CO_2 > 7\%$ (fraksi volume)]    |
| C20  | Helium  |
| C21  | Udara medik/helium/karbon monoksida [ $CO < 1\%$ (fraksi volume)]   |
| C22  | Tidak ditentukan  |
| C23  | Tidak ditentukan  |
| C24  | Tidak ditentukan  |
| <b>CATATAN</b> ulir putar kiri tidak ditentukan. |   |

**Tabel 4 — Dimensi cincin “O”**

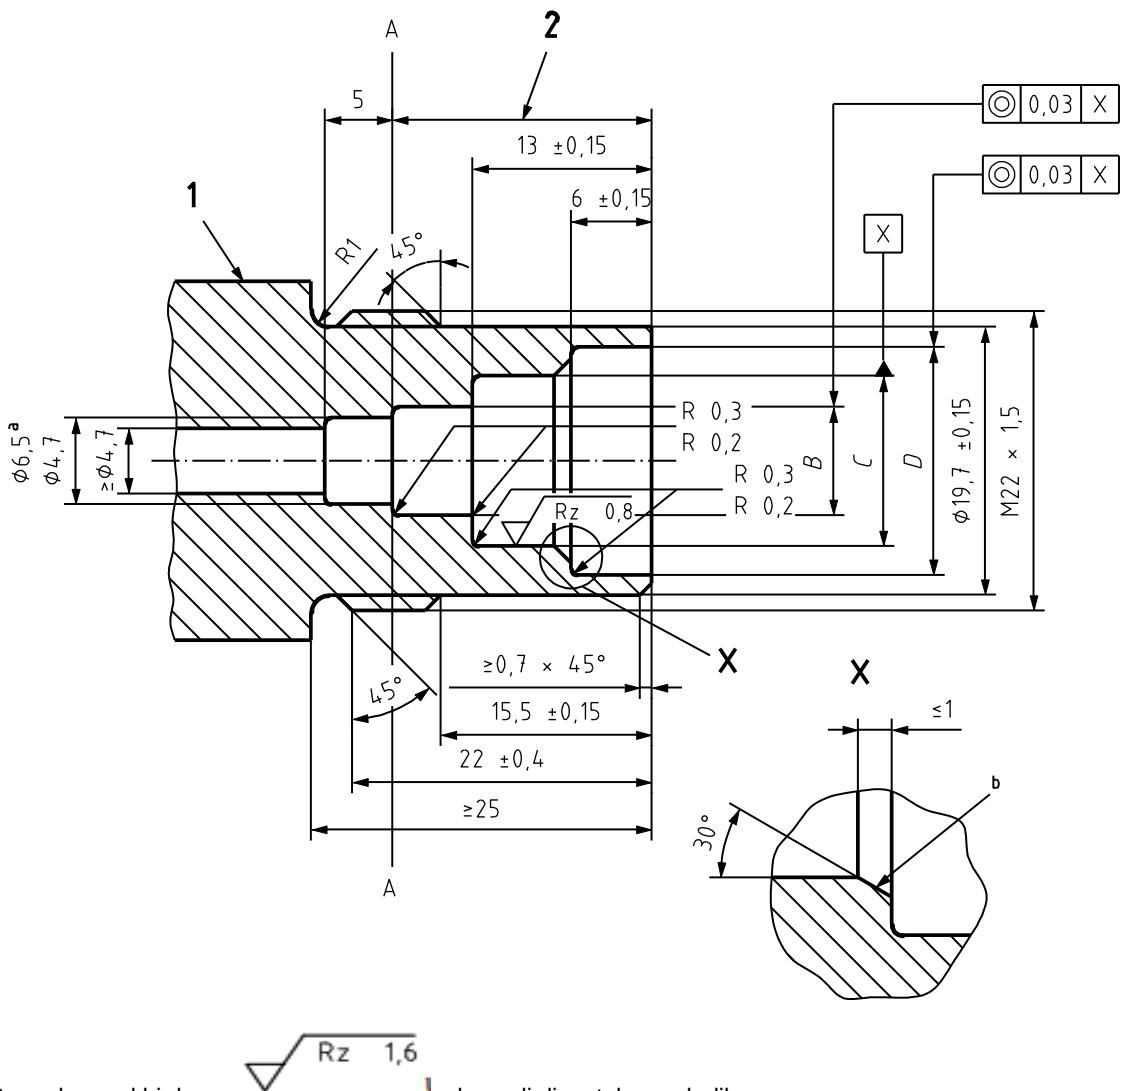

Dimensi dalam millimeter

| Rentang<br>konektor<br>referensi | Diameter<br>internal | Toleransi<br>diameter<br>internal | Diameter<br>bagian | Toleransi<br>diameter<br>bagian |
|----------------------------------|----------------------|-----------------------------------|--------------------|---------------------------------|
| A                                | 7,6                  | $\pm 0,15$                        | 2,4                | $\pm 0,08$                      |
| B                                | 8,1                  | $\pm 0,15$                        | 1,6                | $\pm 0,08$                      |
| C                                | 7,1                  | $\pm 0,15$                        | 1,6                | $\pm 0,08$                      |

**CATATAN 1** Kekerasan yang direkomendasikan 75° IRHD (*International Rubber Hardness Degrees*, Lihat ISO 48).

**CATATAN 2** Dimensi ini didasarkan pada BS 4518<sup>[8]</sup>. Untuk Rentang A, B dan C, cincin “O” didasarkan pada BS 4518 dengan nomor referensi 0076–24, 0081–16 dan 0071–16.

Dimensi dalam milimeter

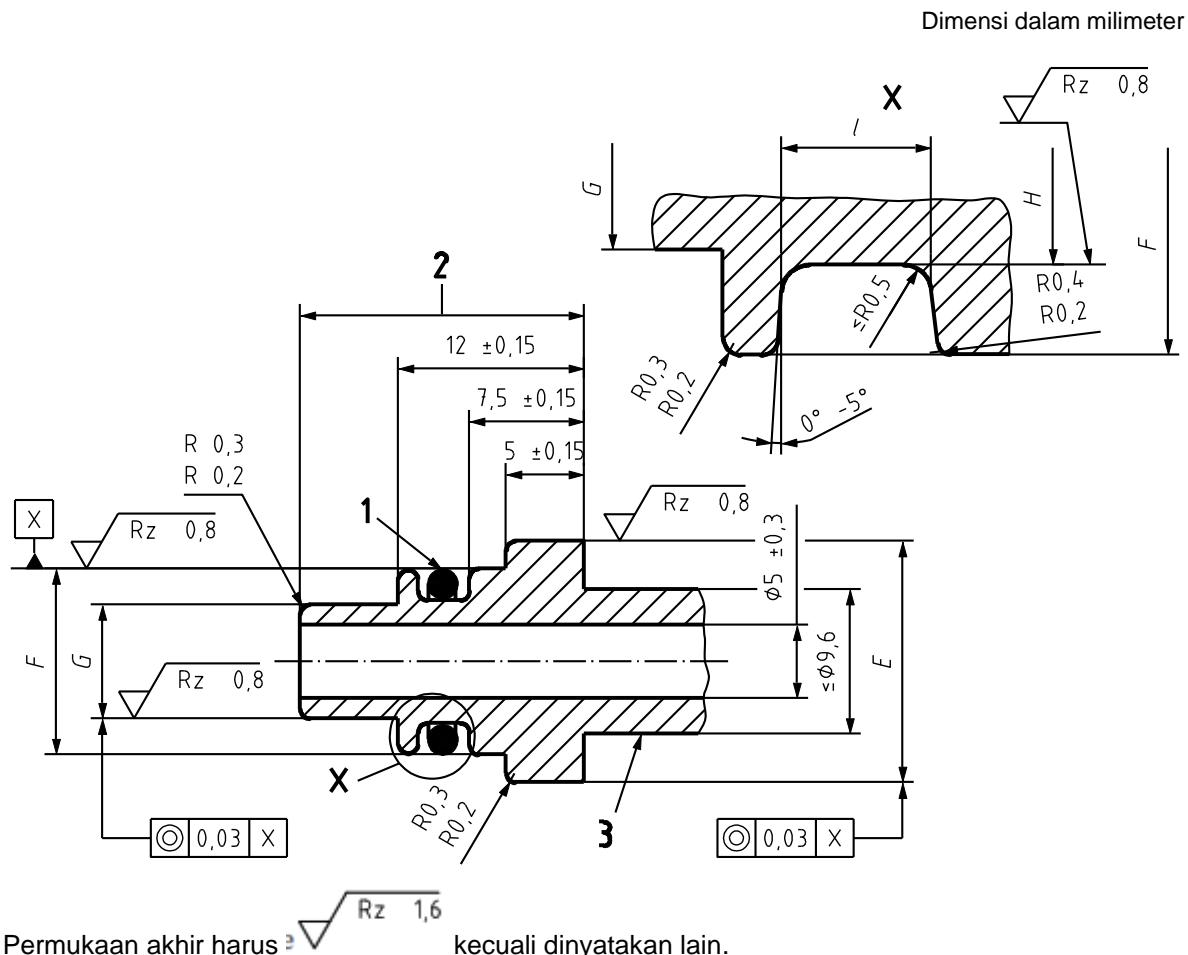

Permukaan akhir harus

kecuali dinyatakan sebaliknya.

**Keterangan**

- 1 Posisi untuk pelabelan simbol identifikasi gas
  - 2 Rentang A =  $19 \pm 0,15$ ; Rentang B =  $25 \pm 0,15$ ; Rentang C =  $31 \pm 0,15$
- a Diameter 6,5 dan 4,7 serta lokasi sisi AA sangat penting. Jika permukaan ini dapat digerakkan, misalnya bila merupakan bagian dari katup periksa, maka penting untuk menyediakan alat khusus untuk mencegah pergerakannya hingga kedalaman lebih dari 19 mm/25 mm/31 mm. Lihat Tabel 2 untuk dimensi B, C dan D.
- b Untuk konektor nomor A10, B18 dan C24, diameter 12,5 mm/11 mm/10 mm meluas hingga kedalaman penuh berturut-turut 19 mm/25 mm/31 mm dan *chamfer* ini akan muncul di *nose of the fitting*.

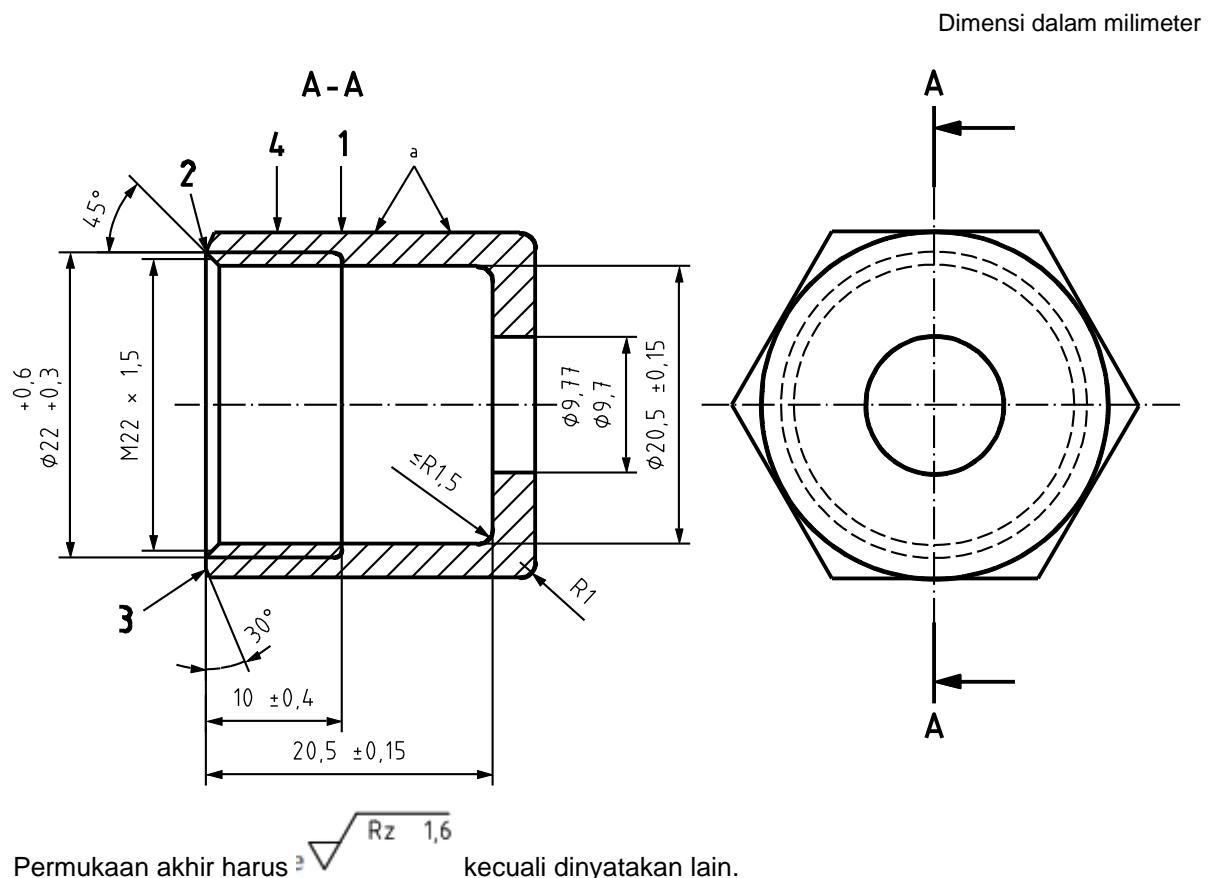

**Gambar 1 — NIST body**

**Keterangan**

- 1 Cincin "O" (dimensi terdapat pada Tabel 4)
- 2 Rentang A :  $18.5 \pm 0.15$ , menggunakan cincin "O" No 0076-24  
Rentang B :  $24.5 \pm 0.15$ , menggunakan cincin "O" No 0081-16  
Rentang C :  $30.5 \pm 0.15$ , menggunakan cincin "O" No 0071-16
- 3 Posisi untuk menandai simbol identifikasi gas

**CATATAN** Keketatan gas dan kelancaran operasi paling baik dicapai ketika cincin "O" dikompresi antara diameter 0,66 mm dan 0,19 mm di bawah kondisi toleransi maksimum dan minimum. Lihat Tabel 3 untuk dimensi E, F, G, H and I.

**Gambar 2 — NIST *nipple***

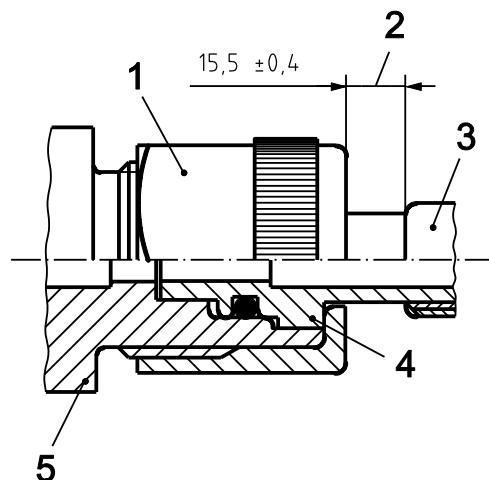

### Keterangan

- 1 *notch* dengan Vee sudut menyilang dari hexagon sampai ketebalan dari flat untuk identifikasi dari *hand nuts* kiri saja
- 2 *chamfer* pada *root* dari ulir
- 3 *chamfer* eksternal
- 4 posisi untuk menandai simbol identifikasi gas
- a Area ini sebaiknya dibuat menonjol (*knurled*)

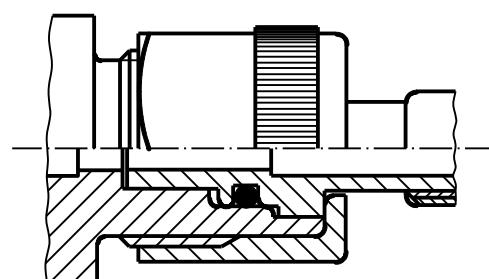

**CATATAN** Bentuk dan dimensi eksternal dapat bervariasi sesuai dengan bahan yang digunakan

**Gambar 3 — NIST nut**

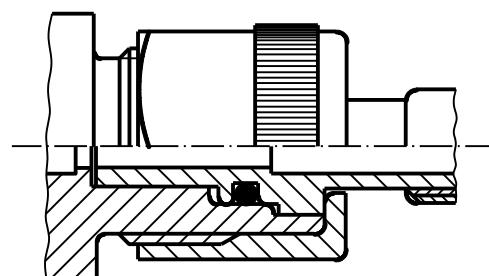

Dimensi dalam milimeter

a) Rentang A

b) Rentang B

c) Rentang C

Keterangan

- 1 NIST nut (lihat Gambar 3)
- 2 area gerak bebas
- 3 perangkat perbaikan ferrule atau selang
- 4 NIST nipple (lihat Gambar 2)
- 5 NIST body (lihat Gambar 1)

**CATATAN** Dimension 15,5 mm untuk memudahkan akses ke ring "O" pada nipple.

**Gambar 4 — Perakitan NIST**

## 4 Penandaan

Konektor harus ditandai secara tepat dan benar dengan simbol gas yang relevan sesuai dengan Tabel 5.

**CATATAN** Dalam kaitan dengan simbol, nama gas dapat digunakan.

Periksa kesesuaian untuk ketepatan tanda dengan uji yang terdapat dalam pasal 5.

Penandaan harus terbaca bagi seseorang yang memiliki ketajaman visual (diperbaiki jika perlu) bila dalam posisi berdiri 0,5 m dari konektor dengan daya iluminasi sebesar 215 lux.

## 5 Uji untuk ketahanan dari penandaan

Gosok tanda dengan tangan, tanpa tekanan yang berarti, pertama 15 detik dengan kain yang direndam dengan air suling, kemudian 15 detik dengan kain yang direndam dengan cairan semangat metilasi dan kemudian 15 detik dengan kain yang direndam dengan isopropil alkohol. Lakukan uji ini pada suhu ambien dan verifikasi bahwa tanda masih dapat terbaca.

**Table 5 — Penandaan**

| Gas medis atau campurannya   | Simbol                                       |
|--|--|
| Oksigen  | O <sub>2</sub>                               |
| Oksigen 93   | O <sub>2</sub> 93                            |
| Dinitrogen oksida  | N <sub>2</sub> O                             |
| Campuran oksigen/dinitrogen oksida [O <sub>2</sub> = 50 % (fraksi volume)]   | O <sub>2</sub> / N <sub>2</sub> O            |
| Campuran dinitrogen oksida/oksigen [N <sub>2</sub> O < 80 % (fraksi volume)] | N <sub>2</sub> O/O <sub>2</sub> <sup>a</sup> |
| Udara medis  | Udara <sup>b</sup>                           |
| Udara untuk menggerakkan alat bedah  | Udara – 800 <sup>b</sup>                     |
| Vakum  | Vac <sup>b</sup>                             |
| Campuran udara/oksigen   | Air/ O <sub>2</sub> <sup>b</sup>             |
| Nitrogen untuk menggerakkan alat bedah                                       | N <sub>2</sub> - 800                         |
| Helium   | He   |
| Campuran helium/oksigen [O <sub>2</sub> < 20 % (fraksi volume )]             | He/O <sub>2</sub>                            |
| Campuran helium/oksigen [He ≤ 80 % (fraksi volume )]                         | O <sub>2</sub> /He                           |
| Campuran oksigen/karbon dioksida [CO <sub>2</sub> ≤ 7 % (fraksi volume)]     | O <sub>2</sub> /CO <sub>2</sub>              |
| Karbon dioksida  | CO <sub>2</sub>                              |
| Campuran karbon dioksida/oksigen [CO <sub>2</sub> > 7 % (fraksi volume)]     | CO <sub>2</sub> / O <sub>2</sub>             |
| Xenon  | Xe   |
| Udara medik/helium/karbon monoksida [CO < 1 % (fraksi volume )]              | LFT <sup>c</sup>                             |
| Campuran gas khusus  | <sup>d</sup>                                 |

<sup>a</sup> Kecuali untuk campuran oksigen/nitros oksida [O<sub>2</sub> = 50 % (fraksi volume)].  
<sup>b</sup> Untuk udara dan vakum boleh menggunakan bahasa Indonesia.  
<sup>c</sup> Uji fungsi paru-paru.  
<sup>d</sup> Untuk aplikasi eksperimental terbatas. Simbol untuk campuran gas khusus harus sesuai dengan simbol kimia komponen.

## Introduction

This International Standard has been prepared in response to the need for a safe method of connecting medical equipment intended to administer medical gases to patients or power medical devices. Medical gases are stored in cylinders or cryogenic vessels, or can be produced on site; several medical devices (e.g. pressure regulators, hose assemblies, flow-masuring devices, lung ventilators, anaesthetic workstations) can be fitted between the source of supply and the medical device. At each interface gas-specific connectors are needed to ensure that the intended medical gas is administered to the patient.

While the desirability of achieving agreement on a single International Standard for screw-threaded connectors has never been in doubt, the present pattern of usage has made such agreement impossible.

Nevertheless, fears that proliferation of individual national standards or practices will eventually result in potentially dangerous cross-connection between components for different gases have led to the choice of several different connector systems, all of which are intended to be incompatible with each other.

This International Standard specifies the dimensions and the allocation of non-interchangeable screw threaded (NIST) connectors for use with medical gases.

This International Standard does not specify the dimensions and the allocation of

- diameter index safety system (DISS) connectors specified in CGA V-5<sup>[9]</sup>,
- sleeve indexed system (SIS) connectors specified in AS 2896<sup>[7]</sup>, and
- quick connectors designed for terminal units specified in ISO 9170-1

## **Anaesthetic and respiratory equipment — Dimensions of noninterchangeable screw threaded (NIST) low pressure connectors for medical gases**

### **1 Scope**

**1.1** This International Standard specifies the dimensions, the allocation and marking of non-interchangeable screw-threaded (NIST) connectors intended to be used at operating pressures up to 1 400 kPa, and for vacuum systems at pressures not greater than 60 kPa absolute.

**1.2** This International Standard specifies NIST connectors intended for use with the following medical gases:

- oxygen;
- nitrous oxide;
- medical air;
- helium;
- carbon dioxide;
- xenon;
- specified mixtures of the gases listed above;
- oxygen-enriched air;
- air for driving surgical tools;
- nitrogen for driving surgical tools;

and for use with vacuum.

**NOTE** Low-pressure hose assemblies for medical gases and vacuum are specified in ISO 5359<sup>[3]</sup>.

**1.3** The information to be supplied by the manufacturer is excluded from the scope of this International Standard because information about the use of NIST connectors is supplied by the manufacturer of each medical device to which the connectors are permanently fitted.

**NOTE** Environmental aspects are dealt with in each International Standard concerning medical devices fitted with NIST connectors.

### **2 Terms and definitions**

For the purposes of this document, the following terms and definitions apply.

#### **2.1**

##### **gas-specific**

having characteristics which prevent connections between different gas services  
[SOURCE: ISO 7396-1:2007, 3.14]

**2.2**

**medical gas**

any gas or mixture of gases intended for administration to patients for anaesthetic, therapeutic, diagnostic or prophylactic purposes, or for surgical tool applications

[SOURCE: ISO 4135:2001, 1.1.1]

**2.3**

**non-interchangeable screw-threaded connector**

**NIST connector**

range of male and female components intended to maintain gas specificity by the allocation of a set of different diameters and a left- or right-hand screw thread to the mating components for each particular gas

[SOURCE: ISO 9170-1:2008, 3.10]

### **3 Dimensions and allocation of NIST connectors**

The dimensions of the NIST body, nipple and nut shall comply with Figures 1, 2, 3 and 4 and Tables 2, 3 and 4.

Allocation of NIST connectors shall comply with Table 1.

Compliance shall be verified by measurement and visual inspection.

**Table 1 — NIST connector allocation — Right-hand thread**

| Connector reference                                    | Gas  |
|--|--|
| A1   | Medical air/oxygen mixture   |
| A2   | Oxygen/nitrous oxide mixture [ $O_2 = 50\%$ (volume fraction)]     |
| A3   | Medical air  |
| A4   | Nitrous oxide  |
| A5   | Nitrous oxide/oxygen mixtures [ $N_2O < 80\%$ (volume fraction)]   |
| A6   | Air for driving surgical tools                                     |
| A7   | Not allocated  |
| A8   | Oxygen   |
| A9   | Not allocated  |
| A10  | Vacuum   |
| B11  | Carbon dioxide   |
| B12  | Oxygen-enriched air  |
| B13  | Oxygen/carbon dioxide mixture [ $CO_2 \leq 7\%$ (volume fraction)] |
| B14  | Helium/oxygen mixture [ $He \leq 80\%$ (volume fraction)]          |
| B15  | Helium/oxygen mixture [ $O_2 < 20\%$ (volume fraction)]            |
| B16  | Xenon  |
| B17  | Special gas mixture  |
| B18  | Nitrogen for driving surgical tools                                |
| C19  | Carbon dioxide/oxygen mixture [ $CO_2 > 7\%$ (volume fraction)]    |
| C20  | Helium   |
| C21  | Medical air/helium/carbon monoxide [ $CO < 1\%$ (volume fraction)] |
| C22  | Not allocated  |
| C23  | Not allocated  |
| C24  | Not allocated  |
| <b>NOTE</b> Left-hand threads have not been allocated. |  |

**Table 2 — Indexing diameters including tolerances for NIST body (see Figure 1)**  
Dimensions in millimetres

| Connector reference | Dimension B          | Dimension C          | Dimension D          |
|---------------------|----------------------|----------------------|----------------------|
| A1                  | 8                    |                      | 17                   |
| A2                  | 8,5                  |                      | 16,5                 |
| A3                  | 9 $+0,09$<br>$0$     |                      | 16                   |
| A4                  | 9,5                  |                      | 15,5                 |

| C24                 | 10                     |                        | 10                     |              |              |

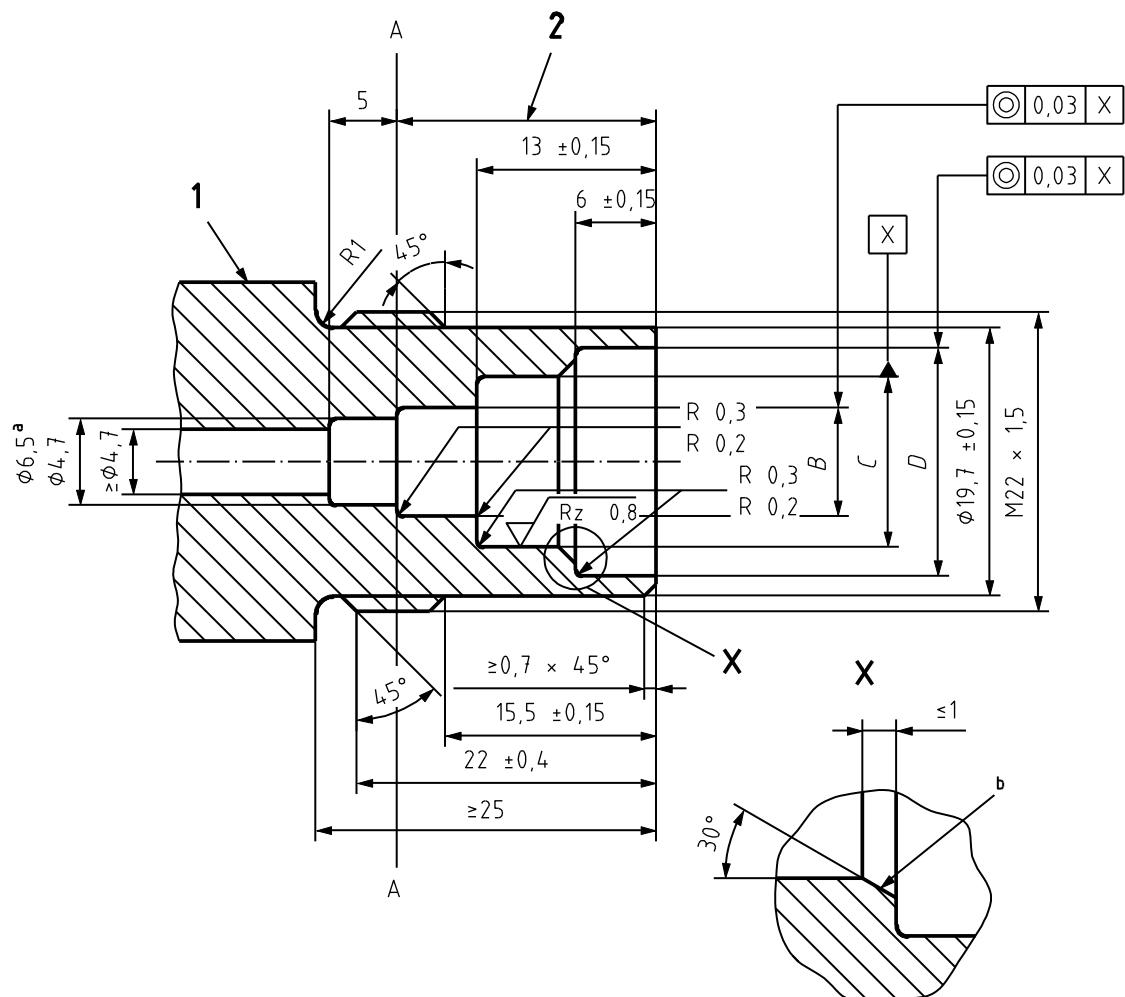

**Table 4 — Dimensions of “O” rings**

Dimensions in millimetres

| <b>Connector reference range</b> | <b>Internal diameter</b> | <b>Internal diameter tolerance</b> | <b>Section diameter</b> | <b>Section diameter tolerance</b> |
|----------------------------------|--------------------------|------------------------------------|-------------------------|-----------------------------------|
| A                                | 7,6                      | ±0,15                              | 2,4                     | ±0,08                             |
| B                                | 8,1                      | ±0,15                              | 1,6                     | ±0,08                             |
| C                                | 7,1                      | ±0,15                              | 1,6                     | ±0,08                             |

NOTE 1 Recommended hardness 75° IRHD (International Rubber Hardness Degrees, see ISO 48).  
 NOTE 2 These dimensions are based upon BS 4518<sup>[8]</sup>. For A, B and C ranges the “O” rings are identified in BS 4518 with the reference numbers 0076–24, 0081–16 and 0071–16 respectively.

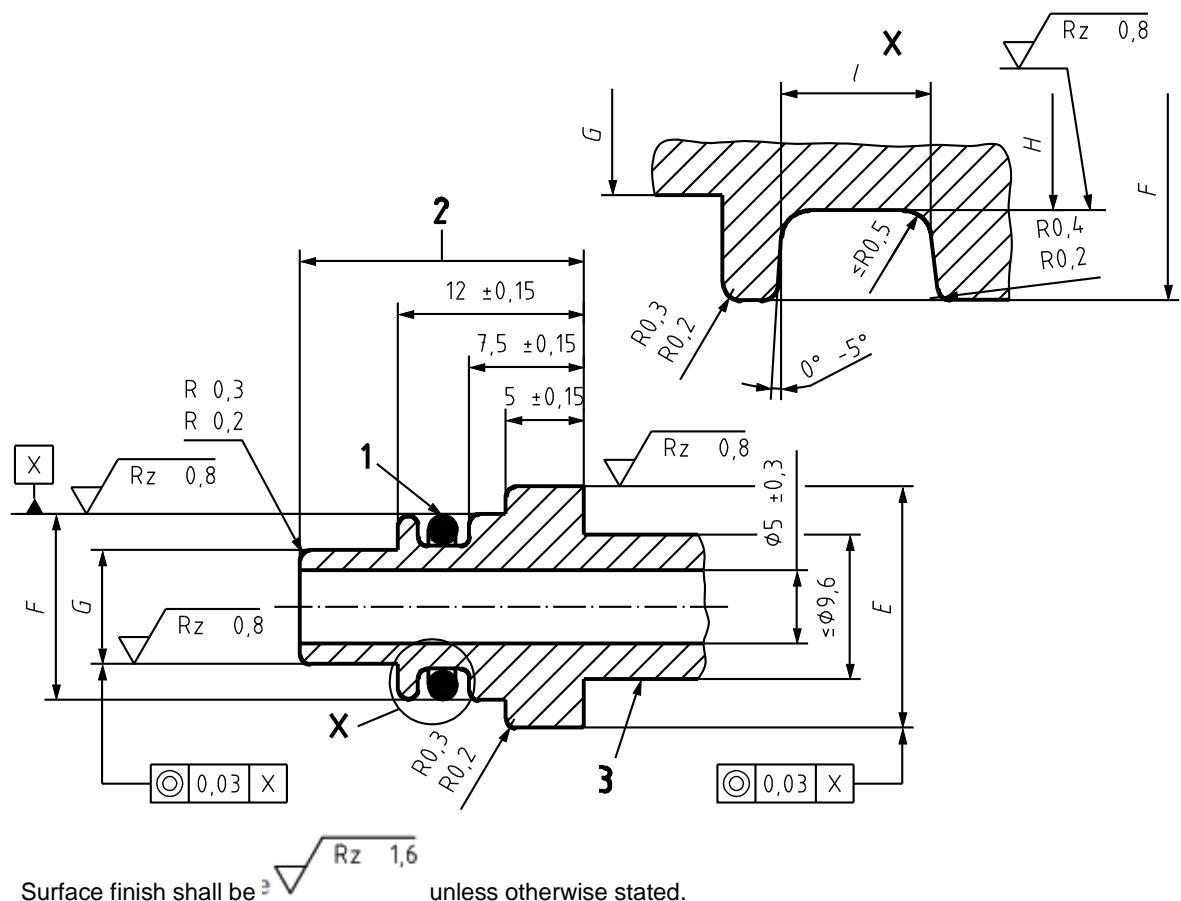

Dimensions in millimetres

**Key**

- 1 position for marking gas identification symbol
  - 2 A range =  $19 \pm 0,15$ ; B range =  $25 \pm 0,15$ ; C range =  $31 \pm 0,15$
- a Diameters 6,5 and 4,7 and the location of face AA are critical. If this face is movable, for example when it forms part of a check valve, it is essential that means are provided to prevent its movement to a depth greater than 19 mm/25 mm/31 mm. See Table 2 for dimensions B, C and D.
- b For connectors number A10, B18 and C24, the 12,5 mm/11 mm/10 mm diameters extend over the full depths of 19 mm/25 mm/31 mm respectively and this chamfer will appear at the nose of the fitting.

**Figure 1 — NIST body**

Dimensions in millimetres

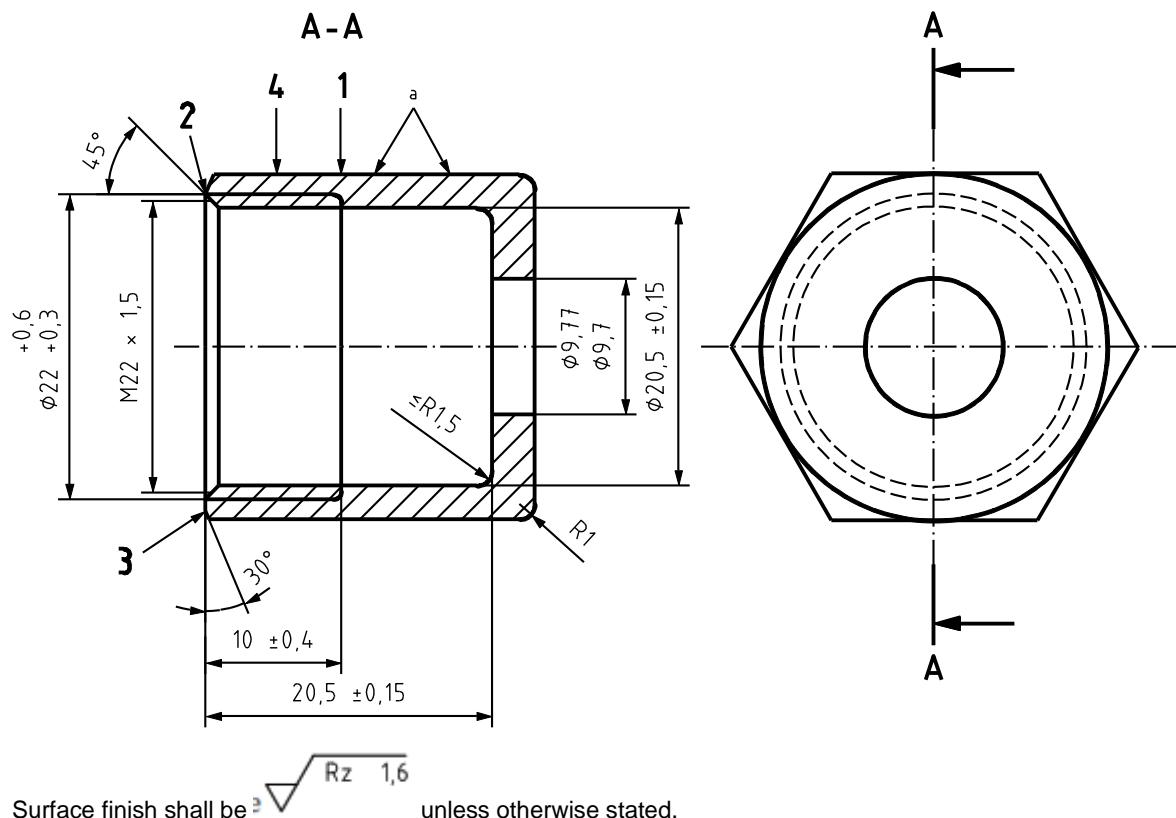

**Key**

- 1 "O" ring (dimensions given in Table 4)
- 2 A range:  $18.5 \pm 0.15$ , use "O" ring No 0076-24  
B range:  $24.5 \pm 0.15$ , use "O" ring No 0081-16  
C range:  $30.5 \pm 0.15$ , use "O" ring No 0071-16
- 3 position for marking gas identification symbol

**NOTE** Gas tightness and smooth operation are best achieved when the "O" ring is compressed between 0,66 mm and 0,19 mm in diameter under maximum and minimum tolerancing conditions. See Table 3 for dimensions  $E$ ,  $F$ ,  $G$ ,  $H$  and  $I$ .

**Figure 2 — NIST nipple**

Dimensions in millimetres

Surface finish shall be  $\nabla R_z 1,6$  unless otherwise stated.

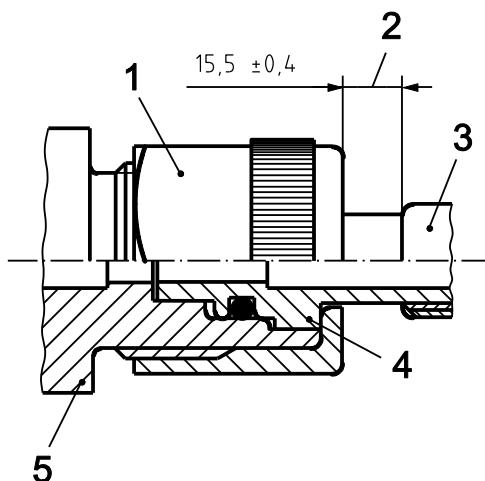

**Key**

- 1 notch with Vee across corners of hexagon to depth of flat for identification of left hand nuts only
- 2 chamfer to root of the thread
- 3 external chamfer
- 4 position for marking gas identification symbol
- <sup>a</sup> This area should preferably be knurled.

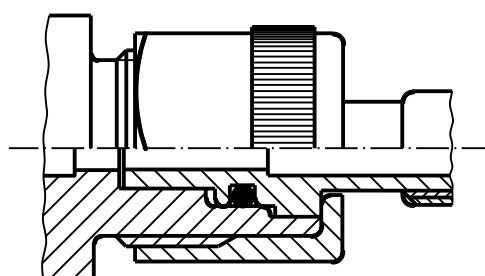

**NOTE** External shape and dimensions can be varied to suit the materials used

**Figure 3 — NIST nut**

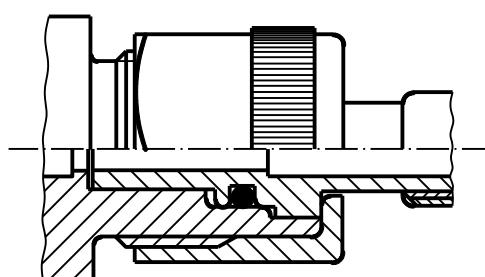

Dimensions in millimetres

a) A range

b) B range

c) C range

**Key**

- 1 NIST nut (see Figure 3)
- 2 free motion area
- 3 ferrule or hose fixing device
- 4 NIST nipple (see Figure 2)
- 5 NIST body (see Figure 1)

**NOTE** Dimension 15,5 mm to allow access to "O"-ring on nipple.

**Figure 4 — NIST assembly**

#### 4 Marking

The connectors shall be durably and legibly marked with the symbol of the relevant gas in accordance with Table 5.

**NOTE** In addition to the symbol, the name of the gas may be used.

Check compliance for durability of markings by the test given in Clause 5.

The marking shall be legible to a person having visual acuity (corrected if necessary) of 1 standing 0,5 m from the connector at an illuminance of 215 lux.

#### 5 Test for durability of markings

Rub the markings by hand, without undue pressure, first for 15 s with a cloth rag soaked with distilled water, then for 15 s with a cloth rag soaked with methylated spirit and then for 15 s with a cloth rag soaked with isopropyl alcohol. Carry out these tests at ambient temperature. Verify that the markings are still legible.

**Table 5 — Marking**

| Medical gas or mixture  | Symbol                                       |
|---|--|
| Oxygen  | O <sub>2</sub>                               |
| Oxygen-enriched air   | a  |
| Nitrous oxide   | N <sub>2</sub> O                             |
| Oxygen/nitrous oxide mixture [O <sub>2</sub> = 50 % (volume fraction)]    | O <sub>2</sub> /N <sub>2</sub> O             |
| Nitrous oxide/oxygen mixtures [N <sub>2</sub> O < 80 % (volume fraction)] | N <sub>2</sub> O/O <sub>2</sub> <sup>b</sup> |
| Medical air   | Air <sup>c</sup>                             |
| Air for driving surgical tools  | Air – 800 <sup>c</sup>                       |
| Vacuum  | Vac <sup>c</sup>                             |
| Air/oxygen mixture  | Air/O <sub>2</sub> <sup>c</sup>              |
| Nitrogen for driving surgical tools                                       | N <sub>2</sub> - 800                         |
| Helium  | He   |
| Helium/oxygen mixture [O <sub>2</sub> < 20 % (volume fraction)]           | He/O <sub>2</sub>                            |
| Helium/oxygen mixture [He ≤ 80 % (volume fraction)]                       | O <sub>2</sub> /He                           |
| Oxygen/carbon dioxide mixture [CO <sub>2</sub> ≤ 7 % (volume fraction)]   | O <sub>2</sub> /CO <sub>2</sub>              |
| Carbon dioxide  | CO <sub>2</sub>                              |
| Carbon dioxide/oxygen mixture [CO <sub>2</sub> > 7 % (volume fraction)]   | CO <sub>2</sub> /O <sub>2</sub>              |
| Xenon   | Xe   |
| Medical air/helium/carbon monoxide [CO < 1 % (volume fraction)]           | LFT <sup>d</sup>                             |
| Special gas mixture   | e  |

**Table 5 — (lanjutan)**

- a To be defined by national authorities.
- b Except for oxygen/nitrous oxide mixtures [ $O_2 = 50\%$  (volume fraction)].
- c National languages may be used for air and vacuum.
- d Lung function test.
- e For limited experimental applications. Symbols for special gas mixtures should conform to the chemical symbols of the components.
